Codeware Compress Crack

Hello from a brand new member Before my questions, I have to make some premises, in order to be better understood.. COMPRESS allows the designer to export the solid model in the following file formats:.. And here comes the whole point: Is it actually possible to perform this operation?.. As we ALL know, since the new 2011 CODEWARE COMPRESS 7110 release, it is now possible to export the solid models properly created and designed according to the ASME code in the COMPRESS environment to any (or at least to most common) CAD environments, including of course INVENTOR 2011.. step iges g jt sat 3dxml What is the purpose of exporting the solid model of -as example- a pressure vessel from COMPRESS to INVENTOR? Well, the answer to this is quite intuitive: once the model is properly exported into the INVENTOR environment, then all the advantages of having a proper well structured INVENTOR model come in sequence, first of all the possibility of creating each flat pattern for any rolled surface such as the shell, pads, nozzles existing in the designed vessel.
